

OOPP Meeting, March 15th 2022 (Group 65)

- **Buddycheck:**
 - Nothing unusual for our group regarding Buddycheck. No one must do the repair assignment.
 - To see results of Buddycheck, go on Brightspace. (Link from e-mail doesn't work)
 - TU Teamwork has a module about feedback and how to make use of it.
- **Paul's Rubric (Flag system) + Project Feedback:**
 - Planning path, coding path and Reviewing path. Weekly feedback from Paul is about the coding path.
 - Grading from best to worst: Green -> Yellow -> Red.
 - Tasks are green, but distribution is red.
 - Sprint plans are yellow, but just milestones on GitLab are good enough.
 - Continuous work/distribution is currently not OK, in week 5 no merge requests from Gerrit and George.
 - Estimation on time for tasks are recommended.
 - Try making milestones with issues related to it to balance time and workload, main issue currently is lack of work done/GitLab issue distribution.
 - TAs measure contribution by commits. (Doesn't show the full picture since it only tracks work done on GitLab)
 - Focused/Specific commits green
 - Style and structure (documentation) yellow, client side needs some more documentation. Javadoc can also be on "why it's done this way" and not only on "how it works".
 - Testing yellow, not a problem now since the codebase size is not very big so testing can't be very extensive.
 - Branch/Merge requests green.
 - Merge to main red, more merge requests are needed.
 - Code reviews yellow but good for now. Same reason as Testing.
 - Pipelines are good so far, only a few instances where pipeline was failing. Use the Gradle tasks to check the pipeline before committing/pushing.

- **Closure:**
 - Feedback/Buddycheck reflection is not mandatory and doesn't need to be submitted.
 - Team needs better communication between members and there needs to be faster merge approvals.
